

Shade Fabric Care and Maintenance Instructions.

Heavy Duty Shadecloth is an Industrial Textile made from High Density Polyethylene, and combines Ultra Violet (UV) stabilisers and colour additives.

During the manufacturing process imperfections may occur. These imperfections are cosmetic only, and will not impact or interfere with the performance of the life of the shade fabric or the function for which it has been designed.

The knitted Shade Sail should be installed by a company or individual that has received accreditation by the building commission, or Building association, or other recognised building authorities in your state. If unsure please check with your state Building Authorities and your local council.

Your shade sail canopy should be installed firm and tight so as to reduce wind flap in the shade fabric. Shade fabric that is loose and sloppy will cause premature failure due to mechanical breakdown. This is not UV breakdown and is not covered by the warranty. The shade will require periodic maintenance to ensure that the Shadecloth fabric remains tight.

Your Shadecloth canopy may become dirty over time. Care should be taken to avoid chemicals that may contain bleach or other agricultural chemicals containing Sulphur and or Halogens (chlorine Bromine). These chemicals may attack the UV stabilisers within the Shadecloth, thus reducing the life of the product and negating the warranty.

The following list of chemicals that may cause such interactions are only some examples and not exhaustive. Such chemicals may include: pesticides, metals, metal oxides and metal salts, all halogens and chemical compounds containing halogens or sulphur in all the oxidation states.

When cleaning the shade cloth, we recommended the use of a mild dish washing liquid with the use of a low pressure water hose and a soft scrubbing brush. We do not recommend the use of high pressure water, to blast the fabric clean.

The fabric warranties are not covered by such damage caused by storms, hailstorms, earthquake, mechanical damage done by birds or other animals, fire, lightning etc. Again this is not an exhaustive list and it is for reference only.

Please refer to our Product Warranty, for further installation and design details.
